

Phishing Email Detection & Awareness Report

Prepared By: Sumasri Jammula
Cyber Security Intern

Introduction

Phishing emails impersonate trusted organizations to steal sensitive information.

Objective

Detect phishing indicators and provide awareness guidance.

Email Analysis

Spoofed sender domain, suspicious URL, urgent language, and generic greeting were identified.

Risk Classification

Spoofed domain - High
Suspicious URL - High
Urgency - Medium
Generic greeting - Low

Impact

Credential theft, financial fraud, identity theft, and unauthorized access.

Recommendations

Verify sender addresses, inspect URLs, enable MFA, avoid clicking unknown links, and report suspicious emails.

Conclusion

The analyzed email is classified as a phishing email based on multiple indicators.
